Click: Tells the user that a right/left click has been triggered

Drag: Tells the user a click, hold and release action has been triggered

SCROLLS PANEL

Tells the user a scroll up, or down has happened on the screen

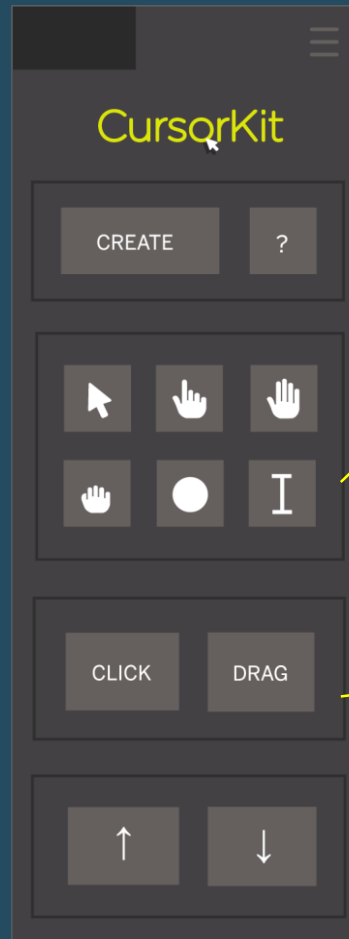

CursorKit

BETA

EASY HOW -TO GUIDE

- 1 Select the layer (on your project window) where you want to create your cursor composition.
- 2 Choose your cursor.
- 3 Add Actions: click or drags.
- 3 Extra feature: Scroll Up and Down in separated animated text layers.
More info [here](#)

TEXT

Apart from the text cursor, use **Shift+Text** button to create a separated text layer with an automatic typewriter effect driven by an expression .

DRAGS

Use Drags to show a click and hold action. Drag button will create a click animation and **Shift+Drag** button will create the end of it (the end of the click and hold action).

INSTALL

- Unzip the content of **CursorKit Beta.zip** into the **ScriptUI Panels** folder and restart After Effects
 - Windows:** Program Files\Adobe\Adobe After Effects <version>\Support Files\Scripts\ScriptUI Panels
 - Mac:** Applications\After Effects<version>\Scripts\ScriptUI Panels
- You will find the script under the **Window** menu.
- Open it, Dock it and Enjoy it!

SPECIAL THANKS

To all the people that supported me with valuable feedback and incredible advices. Thanks again for taking the time to check the code and answer my noob questions.

CursorKit

BETA

CREATE CURSOR PANEL

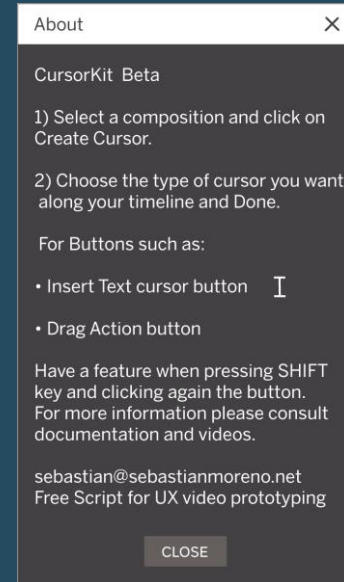

To create a cursor: Select the comp where you want to create a cursor and click on: Create cursor.

Help Button : for some info.

CURSOR TYPE PANEL

Choose a cursor type in the library.

Adds a cursor image and opacity key with 100 % to the one chosen and 0% to the rest.

ACTIONS PANEL

- 1 **Click:** adds a click action (ring effect animation) and scales-down animation when using mobile cursor.
- 2 **Drag:** adds a ring effect like the click but with a pause frame, like that it is shown that you have click and hold, and adds the inverse click animation for releasing.
- 3 **Scroll subpanel:** adds text animation for Scrolling Up or Down actions in a separated layer.

FUTURE FEATURES AND FIXES

- Shape layer animations instead of images
- Better UI
- Cursor styles or Style-Libraries (Ex: pc cursors) and create your own feature
- Counter for comps every time a new Cursor Comp(i) is create in the project
