

MUSIC VISUALIZATOR

AFTER EFFECTS CS5 TEMPLATE

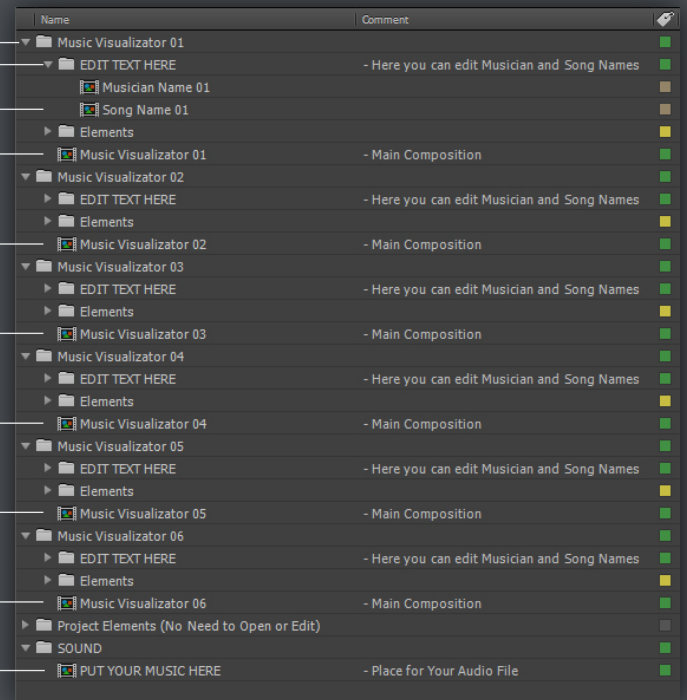

Thank You for choosing this Template. This is Adobe After Effects CS5 project which will help you to understand how to visualize your music based on its frequency and waveform. No keyframes or third-party plug-ins are engaged there. Just replace initial audio file with your one, put musician and song names and you are ready to go! Let's talk about the features of the project settings. Actually it is pretty simple. Take a look:

This template has six different predesigned visualizers to your choice.

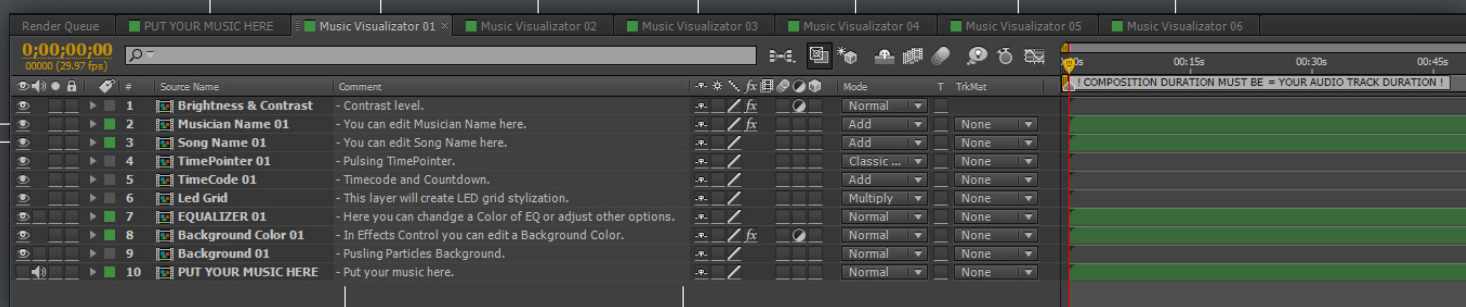

You need to put Musician Name and Song name to appropriate compositions in each chosen visualizers. And of course you can change the font and text color if you want to. Just double click on it.

These are the Main Compositions. Everything happens here.

And you need to put a music file in this composition.

Project Bin

Timeline

All compositions have an understandable description so you will not get lost.

And finally one important thing. Due to the fact that this template is using expressions you need to change chosen main compositions durations according to your audio file duration (hh:mm:ss:ff) without changing the duration of the other compositions.

Feel free to experiment! You can adjust everything in this template and easily create a huge amount of combinations with these visualizations and add your own effects!
